

Replacing outdated tiled roofs

A common question is: "Can we replace our tiles with Roofing Industries long run products?" The answer is simply Yes,* and what's more, consumers are recognising that both prepainted and unpainted lightweight long run metal roofing products provide an aesthetically pleasing point of difference.

* A building consent may be required for change of roof types.

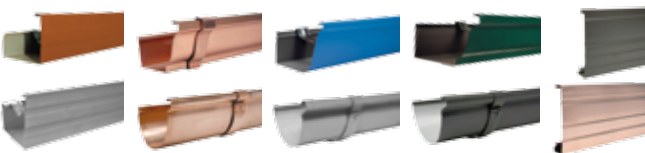

Accessories

All Roofing Industries Roofing products are fully supported with a range roofing accessories, ensuring uniformity of materials, colour performance, and consistent product warranties.

Rainwater goods

Simply select a rainwater product, along with one of the wide range of substrates and surface finishes, to enhance and complete your project.

www.roof.co.nz

Roofing Industries is a 100% NZ owned manufacturer of metal roofing and cladding products. is a member of the NZ Metal Roofing Manufacturers Inc, and the Roofing Association of New Zealand. Our quality roofing and cladding materials are manufactured in New Zealand from NZ Building Code approved materials and particularly suitable for meeting our unique climatic conditions.

RE-ROOF

Add Value & Protect Your Investment!

Want to add value to your property, or more importantly, do you need to replace or refurbish that tired and leaky old roof or cladding?

Let's face it, who needs a leaky building!!!

Why Re-Roof?

The choice to re-roof may be one of absolute necessity due to the failure of the current materials to prevent moisture entering the building, an addition to the existing building, or a desire to enhance and revitalise the overall appearance of the property.

Modern roofing and cladding products are specifically designed and manufactured using various substrates and paint coatings meeting environmental and climate conditions in which they are to be installed.

Our experienced staff will recommend the appropriate materials for your project, thereby avoiding possible pitfalls, and ensuring you are supported by meaningful product warranties.

Materials

Depending on your budget, environmental conditions and design aspirations, you can choose from a number of material substrates including: Zinalume®, Galvanised, Aluminium, Copper, Stainless steel, VM Zinc® and Titan Zinc.

Colours

Choose from a wide selection of pre-painted **COLORCOTE** and **COLORSTEEL** modern roof and cladding colours to bring visual appeal and to enhance your project.

Environmental & climatic conditions

Our experienced staff recognise that your home and property is most likely to represent a large capital investment, and it is probable that you derive considerable satisfaction from the focal point that your property provides.

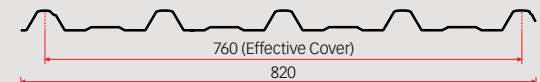

Roofing in New Zealand needs to withstand the effects of our particularly harsh ultra violet rays, and being relatively close to the coast, salt laden air tends to be prevalent in many parts of the country. Therefore, it is extremely important you receive accurate recommendations to the appropriate and most cost effective product along with a range of related accessories which should be utilised to give your project the protection and visual appeal it rightly deserves.
